

ABSTRACT

Process for the preparation of primary amines of formula (I):

where R₃ represents an alkyl, cycloalkyl or aralkyl group, by reaction of a triazolium salt of formula (II):

where R₁ and R₂ represent hydrogen or an alkyl, aralkyl or aryl group, R₄ represents an alkyl or aralkyl group or a residue of an organic polymer functionalized by an alkylating group, and A⁻ represents a halogen, alkylsulphonate, arylsulphonate, alkyl sulphate, hydrogensulphate, hemisulphate, perchlorate or hydroxide, with a hydride, in order to obtain an amine of formula (I), which is isolated, if desired, and intermediates.
